ABSTRACT:

PURPOSE: To provide a method to process the messages to be sent to a vehicle data processor that can quickly and surely transfer data between the computers which are built into a vehicle.

CONSTITUTION: Each message includes the information on its contents. A subscriber compares the information on the message contents with the information contained in a stored list, assigns the internal processing priority contained in the list to the compared information, and then decides the **sequence of messages prepared for transmission of the information regardless of their processing** priority.
